

PROJECT MANAGEMENT RUNOFF AND EROSION CONTROL - BROME-Missisquoi MRC.

On August 18, citizens were treated to an excellent presentation in Cowansville on the motives and the means proposed and the regulations made thereunder, see <http://www.virage-eau.ca/consultation-publique-sur-la-gestion-des-eaux-de-ruissellement-et-du-controle-de-lerosion/>

This bill seeks to establish uniform rules throughout the MRC in order to preserve the integrity of the environment and water quality. All citizens are concerned, as all activities will be affected: land development, construction project management of public roads or farm land ... This approach is not unique to our area because other MRC have already defined the code of conduct on this issue.

Following the presentation, some citizens have expressed concerns about some of the binding while others believe that the proposed measures do not go far enough aspects. Citizens are encouraged to visit the project on the site and if you want to make sure your suggestions on the management of stormwater and erosion control officials.
